

Security Wall Bracket

With a lockable enclosure for the AlcoVUE® breathalyser, the wall bracket protects against theft whilst permitting use of the AlcoVUE® in a self-testing environment.

A mouthpiece dispenser is part of the unit and is used to store and display the hygienic, individually-wrapped mouthpieces for the AlcoVUE® breathalyser.

The swing arm gives the ability for the user to swing the AlcoVUE® unit away from the wall for testing, and for the breathalyser to be stored flat against the mounting board or wall when not in use.

The wall bracket can be used in conjunction with the mounting board (DDS-ALV100-BB) or separately.

Part Numbers

DDS-ALV100WB-MS Mild Steel Wall Bracket, powder coated
DDS-ALV100-BB Instructional Backing Board

Mounting Board

The mounting board provides clear instructions on how to use the AlcoVUE® breathalyser. It can be installed in common areas such as staff lunch rooms or at work site entrances to encourage staff to check their breath alcohol levels prior to commencing work.

Made from a sturdy aluminium / polystyrene sandwich panel, the board can be pole mounted or installed flat against a wall and is typically used in conjunction with the security wall bracket (DDS-ALV100WB-MS).
